

# THESIS™

## Rapid E-Learning Tools and more...

Add THESIS to your SCORM eLearning authoring tool box today! See how easy it is to rapidly convert and create learning objects. THESIS is ADL certified and integrates with SCORM Conformant Learning Management Systems.

The THESIS product suite is one of the easiest and quickest tools to use for rapid SCORM conversion and content authoring for your eLearning needs.

### Training Development Challenges

Training and learning requirements are constantly changing; the courses and content to meet those requirements must be quick and easy to create and maintain, or they become obsolete before organizations can achieve a significant Return On Investment. In addition, the solutions must be cost-effective, deliver real and measurable performance and be an improvement to an organization.

### HunterStone's Goal:

To focus on the people who create courses and learning content, to improve the processes of creating and maintaining the learning content, supply key technology that's required for an organization to save time and money, increase productivity, and ultimately provide the desired learning results.

### THESIS Product Suite

The THESIS product suite provides four application options that help an organization create eLearning objects from virtually any type of lesson content file.

The THESIS Learning Object Manager represents the core of the product suite of SCORM conformant eLearning tools that allow users to convert any web presentable content and create and deploy standards-based, multimedia learning content to be used with any SCORM conformant Learning Management System (LMS). Users can build new SCORM-conformant content from scratch, convert existing content to SCORM, import SCORM-conformant content, create SCORM assessments, and package these objects into a course.

**THESIS Learning Object Manager** effectively addresses the significant problem learning environments have, which is converting, creating and managing content from multiple sources. This powerful tool opens the door to conversion and customization of content not only from "in-house" content creators but also from 'off-the-shelf' content providers.

**THESIS Lite** edition is the entry level product and is the tool that lets the people in your organization use the entire Microsoft Office suite to create eLearning content. THESIS Lite is fully conformant with SCORM 1.2 and SCORM 2004. THESIS self installs menus and icons into Word, PowerPoint, Excel, FrontPage, and Visio for ease of use.

**THESIS Professional** is our most popular desktop tool. The product encompasses the basics of THESIS Lite, with the power of the Learning Object Manager to enable the content creator/subject matter expert to create and convert any of their learning materials to a SCORM Learning Object.

**THESIS Librarian** "SCORM Enables" Microsoft SharePoint to provide subject matter experts and learning content authors with a Learning Content Management System environment where they can share Learning Objects and collaborate to develop SCORM conformant course content by utilizing Microsoft's SharePoint technology.
